

## **30MINUTES NEW LEARNING**

### **DIFFERENCE BETWEEN WEB-DEVELOPER AND SOFTWARE DEVELOPER**

Web Developers build apps and interactive websites. Web development can include everything from simple text files to complicated data processes. Web developers are creative people who build websites from the ground up. To do this, they need to be proficient in programming languages like JavaScript or Java.

Software Developers, on the other hand, are responsible for creating more complex applications and programs for computers and mobile devices. They create, conceptualize, program, document, test, and upgrade software and their components.
