30 MINUTES NEW LEARNING

Difference between git and github

- Git is a version control tool and github is a web application.
- Git helps individual developers keep track of changes and github allows users to host, explore, and collaborate on code with their teams.
- Git goals include speed, data integrity, and support for distributed, non-linear workflows and github offers source code management functionality of Git as well as adding its own features.
- Git has no user management feature and github has built in user management.

KEYPOINT

- You do not need GitHub to use git, but you cannot use GitHub without using git.

Some Operations

- Create operation- using this we can create a new user name,pass etc.
- Clone operation-using this create an object of remote repo.
